

Autoimmune diseases in dermatology

Residents Course | 11-12 December 2025 | Paris, France

Course Description

The Autoimmune and Autoinflammatory diseases in dermatology course provides with an advanced knowledge of the pathophysiology, diagnosis and treatments available for the different fields of medical dermatology. Course participants will be exposed to the principles of clinical challenges, evidence-based medicine, and drug development. The course will be interactive including critical literature review and case-based learning. Each course participant will be asked to bring one or more difficult to treat patient case from their clinic for group presentation and discussion.

Learning Objectives

- Develop the ability to diagnose systemic inflammatory diseases that involve the skin
- Master the ability to check whole visceral involvement of the systemic disease
- Become professional to treat skin involvement and know basic principles for extra skin symptoms treatment
